                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /gene="HI1142"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 30332 [a-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web Site (http://www.genetics.wisc.edu). *** The E. coli K-12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Wed Nov 24 00:43:15 1999; MasPar time 0.52 Seconds 326.236 Million cell updates/sec

Tabular output not generated.

>US-09-103-287-2 (1-437) from US09103287.pep 3121

Description: Perfect Score: Sequence:

1 MTHYHFVGIKGSGMSSLAQI.......GDIQKLQNAYLDKLGMKNAF 437

Scoring table: PAM 150 Gap 11

Searched: 1479 segs, 387401 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: HIV-AA8 1:ALL

Statistics: Mean 46.900; Variance 101.768; scale 0.461

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sample has been taken from patient M, one of the seven patients (A,M,L,F,C,V,R), in the study(1). All patients had acute, self-limited symptomatic illness with measurable viremia followed by seroconversion. Patient M was a chronically infected male who subsequently transmitted the virus to patient F. The authors report that the sequences in this study are found to be uniformly macrophage-tropic and non-syncytium-inducing. The sequence for sample M clone 2, along with other patient M clones 1, 3-9, 11, and 12, is shown in alignment following the printed text entry. These gag sequences cluster with HIV-1 B subtype sequences. See also L21224-L21591 and L24161, L24162.

This sample has been taken from patient F, one of the seven
This sample has been taken from patient F, one of the seven
patients (A,M,L,F,C,V,R), in the study(1). All patients had acute,
self-limited symptomatic illness with measurable viremia followed
by seroconversion. Patient F was infected by patient M via sexual
transmission. The authors report that the sequences in this study
are found to be uniformly macrophage-tropic and nonsyncytium-
inducing. The sequence for sample F clone 10, along with other
patient F clones 1-9, 11, and 12, is shown in alignment following the
printed text entry. These gag sequences cluster with HIV-1 B subtype
sequences. See also L21224-L21591 and L24161, L24162.
